

Email Auto-Delete Flow

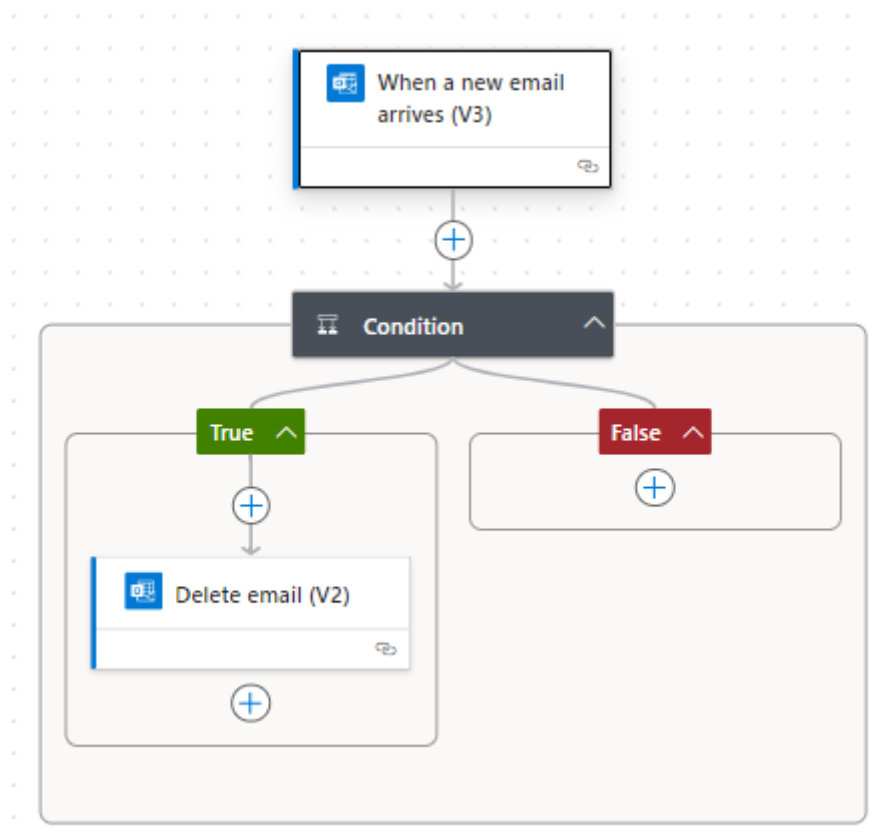

Overview

This flow automatically deletes emails based on specific subject line criteria as soon as they arrive in your inbox. It's designed for those who want to manage their inbox by removing certain types of emails without needing to manually delete them.

How It Works

The flow listens for new emails and checks if the subject line contains certain keywords or matches specific conditions. If an email matches one of the conditions, it's automatically deleted.

Step 1: Set up a Trigger: "When a new email arrives (V3)"

Step 2: Add an action: Condition: Check Email Subject

Condition

Parameters Settings Code view About

Condition Expression *

Provide the values to compare and select the operator to use.

OR

<input type="checkbox"/>	Subject x	starts with	
<input type="checkbox"/>	Subject x	starts with	
<input type="checkbox"/>	Subject x	is equal to	
<input type="checkbox"/>	Subject x	is equal to	

+ New item

These conditions check if the subject either **starts with** or **is equal to** predefined values (for example, specific report names).

The condition uses **"OR" logic**, meaning if any of the conditions are true, the flow proceeds to the next step.

→ True Branch: "Delete email (V2)"

- If the email matches the criteria, it will be automatically deleted using the "Delete email (V2)" action.
- The flow uses the **Message Id** of the incoming email to ensure that the correct email is deleted

Delete email (V2)

Parameters Settings Code view Testing About

Message Id *

body/id x

→ False Branch: No Action

- If the email does not meet any of the conditions, the flow takes no further action and leaves the email in the inbox.
